Fatal Opioid Overdose Characteristics and Risk Factors

January 2017- December 2017

In St Charles County, most who fatally overdose have some history of substance abuse (81%) and almost one-quarter have overdosed previously. Fatal overdoses rarely happen alone with no bystander present (31%), and EMS is often present post-event (96%). Many overdoses indicate polysubstance use, specifically including use of benzodiazepines (38%). Unfortunately, substance abuse treatment is indicated in less than 1 in 3 people who fatally overdose in St CharlesCounty.

This data sheet provides the most timely data available for each topic, meaning data is subject to change and time periods for different variables may not align. This data uses ESOOS specific definitions for opioid overdose, which may result in frequencies that do not match other data sources.
